

Town of Exeter Capital Improvement Program 2013-2018

**Product of the Exeter
Planning Department**

Town of Exeter
2013 -2018 Capital Improvement Program

Background

Exeter's Capital Improvement Program or CIP identifies the capital needs of the town and indicates how these needs might be funded over a six-year period. It describes long-term capital needs for all municipal departments including highway, police, fire, parks and recreation, water, sewer, public library and other departments.

The CIP is a planning document. As such, it is updated annually and subject to change as the needs of the town change. Adjustments are made for new regulations, growth in population, transportation alternatives, changes in priorities, or other needs. One effective use of the CIP is that it provides for considerable advance project identification, public discussion, project design and definition of scope, cost estimating, and financial planning.

Statutory Authority

The CIP, conforms to the requirements of "Title LXIV Planning and Zoning; Chapter 674; Local Land Use Planning and Regulatory Powers; Capital Improvement Program; Section 674:5-7".

Process

The CIP process is coordinated annually by the Town's Planning Department. Participating municipal departments submit a 6-year listing of proposed projects, including vehicle and equipment needs in excess of \$25,000. This year the requests were reviewed and critiqued by the Town Manager and Town Planner and then presented to the Planning Board. The Planning Board then adopts the CIP each year in September, and forwards the report to the Selectmen. The Board of Selectmen determines the final listing of projects to be presented at the Town Meeting each year. Under SB2, selected projects are then voted on by the voters at the March elections.

Purpose

The goal of the CIP is to establish a system of procedures and priorities by which to evaluate public improvement projects in terms of public safety, public need, project continuity, financial resources, and the strategic goals for the Town. The CIP allows town departments to establish a methodology and priority system to providing efficient and effective services. It also provides an opportunity for citizens and interested parties to voice their requests for community improvement projects.

Guiding Principles

The guiding principles used to develop the Capital Improvement Program (CIP) are as follows:

- To preserve and improve town owned infrastructure through public facility planning, construction, rehabilitation and maintenance;

- To maximize the useful life of capital investments by scheduling major renovations and modifications at the appropriate time in the life-cycle of the facility;
- To identify and examine current and future infrastructure needs and establish priorities among projects so that available resources are used to the town's best advantage;
- To improve financial planning by comparing needs with resources, estimating future bond issues as required, and identifying potential fiscal implications to Exeter taxpayers and ratepayers;
- To provide a forward looking planning tool for the purpose of contributing to the creation of a stable property tax rate;
- To aid the Town's elected officials, appointed committees, and department heads in the prioritization, coordination, and sequencing of various municipal improvements;
- To inform residents, business owners and developers of needed and planned improvements.

About This Document:

This report is divided into multiple sections which are as follows:

- Page 1: 2013 Project Summary List
- Page 2: 2013 Vehicles/Equipment Summary List
- Pages 3-12: 2013 to 2018 Spreadsheets:

This section provides the reviewer with a list of all projects or vehicles and equipment within the next six years and includes the project number, title, year, and associated costs. Spreadsheets are organized in the following categories:

- Summary of Projects by Year – General fund
- Summary of Vehicles by Year – General fund
- Summary of Projects by Year – Water/Sewer Enterprise Funds
- Summary of Vehicles by Year – Water/Sewer Enterprise Funds
- General Fund – Existing and Proposed Debt Service
- Water Fund – Existing and Proposed Debt Service
- Sewer Fund – Existing and Proposed Debt Service

- Department Worksheets:

This Section includes 2013 projects, vehicles and equipment provided by departments. It should be noted that each project is assigned a number that can be found on the left-hand column of the spreadsheets and at the bottom of the worksheets. The worksheet order is as follows:

Projects: Public Works -Town Facilities, Fire Dept., Public Works - Engineering and Highway, Conservation Commission, Water and Sewer,

Vehicles and Equipment. Fire Dept., Public Works, Parks and Rec., Water and Sewer

Town Planner Comment

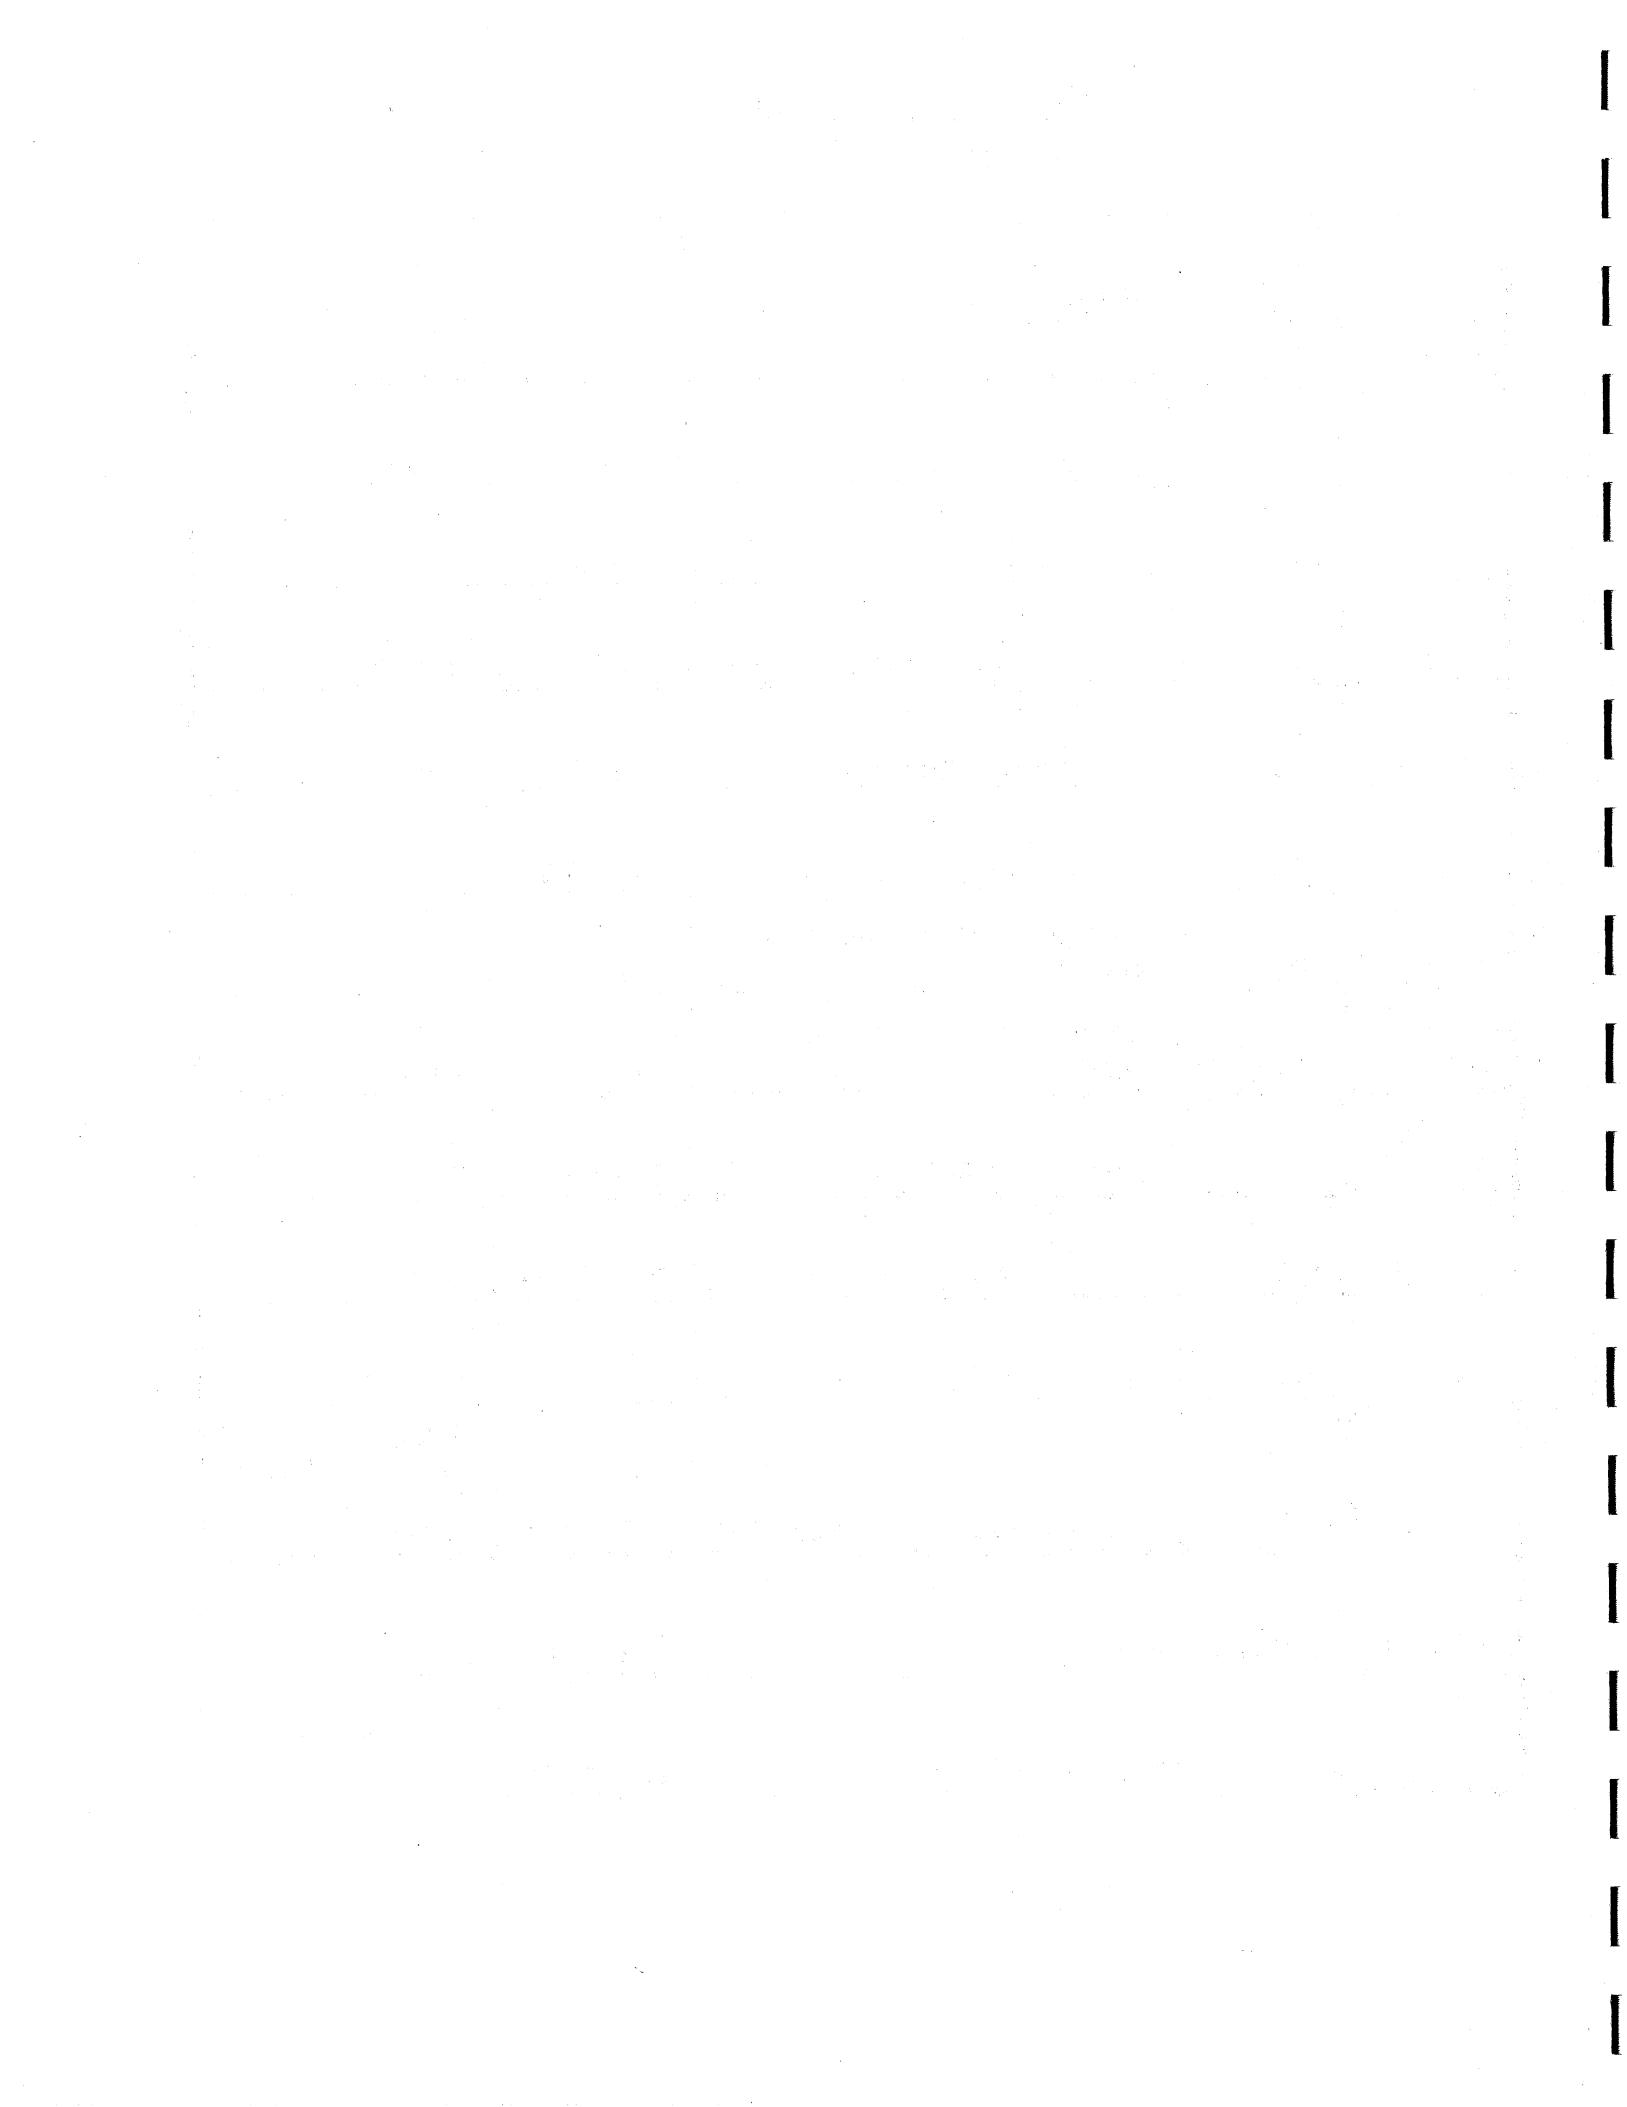

The dedicated town staff that put this document together for the betterment of town facilities and services are hopeful that it will serve decision makers and voters in planning and determining the future of Exeter's valued resources. For further questions on various projects, please call the contact person identified on each worksheet.

**Capital Improvement Program
Proposed Project Summary for 2013**

Project No.	Project Title	Project Cost	Notes
A1	Exterior Paint and Repair for Rec & Senior Center	\$40,000	
A2	Public Works Complex Heating Replacement	\$110,957	
B1	Sub-Station Design and Construction	\$2,500,000	
D1	Supplemental Pavement Management System	\$500,000	
D3	String Bridge (funding authorized in 2008)	\$100,000	
D4	Linden St. & Court St. Culvert Repairs	\$150,000	
F1	Raynes Farm Improvements	\$30,000	
Total Cost General Fund Projects		\$3,430,957	
D2	Portsmouth Ave Reconstruction - Phase 1: Water Improvements	\$180,000	
D2	Portsmouth Ave Reconstruction - Phase 1: Sewer Improvements	\$940,000	
H1	Waste Water Trt. Plant Facilities Plan	\$50,000	
Total Cost Sewer and Water Fund Projects		\$1,170,000	
TOTAL COST OF ALL 2013 PROJECTS		\$4,600,957	

Capital Improvement Program
Vehicle and Equipment Replacement for 2013

Dept.	Project No.	Project Title	Project Cost	Life to Date Maintenance Cost
Fire	B3	Ladder 1 Replacement	\$880,250	\$99,530
Fire	B4	Chief's Car Replacement	\$17,875	\$8,715
Fire	B5	Utility 1 (Pick-up) - Replacement	\$29,585	\$15,267
Maint.	A6	Maintenance Electrician Van #6	\$22,600	\$6,177
Highway	D8	6 Wheel Dump Truck (#31)	\$132,109	\$53,414
Highway	D9	Replace Car #1 w Jeep Liberty 4x4	\$17,875	\$5,870
Highway	D10	Replace Car #54 w Jeep Liberty 4x4	\$17,875	NA
Parks/ Rec	E1	Chevy 1 Ton Replacement	\$25,500	\$6,582
Total Cost of General Fund Vehicles			\$1,143,669	
Sewer	H7	Box Truck Replacement (#19)	\$43,063	\$13,038
Sewer	H8	Vacuum Truck Replacement (#67)	\$393,129	\$85,877 (Note: an additional \$11,000 maint. slated for this year)
Cost of Water/Sewer Vehicles			\$436,192	
TOTAL COST OF ALL 2013 Vehicles			\$1,579,861

All interest based on current SRF (State Revolving Fund loan rates for indicated period)													
Existing													
Total Additional Debt Service													
Total New Debt Service Budget													
Water Rate Impact of Proposed Debt													
See below													
Dollar Cost													

Rate increases of 10% equal approximately \$200,000 in new revenue based on current consumption assumptions

An average user of 12,000 gallons of water per quarter would see their quarterly bill increase \$6.84 or \$27.36 annually with a 10% rate increase

A 20% rate increase to the average user equals \$13 per quarter or \$54 per year (approx.)

2013 - 2018 CIP Project Request

Date Submitted: July 2, 2012
 Year Funding is Requested: 2013

Department:	Public Works - Maintenance	Priority (1 of 8, etc.):	2 of 5
Project Title:	Exterior Paint and Repair Parks & Rec Building.	Estimated Total Cost:	\$ 40,000
Contact:	Kevin Smart	Estimated Useful Life (Years):	TBD
Phone:	778 - 0591 ext. 162	Previously Presented? (Yes/No)	<input checked="" type="checkbox"/> Yes
e-Mail:	ksmart@exeternh.org	When (Please give year):	2007
		Growth Related? (Yes/No):	<input type="checkbox"/> no

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction Equipment New/Replacement Real Property Acquisition Road Improvements Water/Sewer System Improvements

1. General Project Description? Project consists of the siding and trim repairs, surface preparation, and painting of the exterior Parks and Recreation Building located on Court Street. The building is a historic structure with detailed and ornate architectural details. The heavily molded trim work and eves are in need caulking and painting to stop the threat of decay that is of particular concern. The clapboard siding requires surface preparation, priming and painting to provide a sealed surface that will conform to a manufacturer's warranty for a specific lifespan. In this process the siding and trim surface preparation must meet the manufacturers' specifications to realize the intended duration. The budget amount is assessed on total building area, present condition, local labor rates, rental equipment, waste disposal, and material costs. A manufacturer's representative for the chosen paint products shall be available to make recommendations for the surface preparation, and application with the intent on receiving the full projected lifespan, and manufacturers warranty. Coating lifespan are contingent upon the type of construction and material condition. A projection would be to "touch up" every 5 years, and recoat in 10 years.

Work Breakdown - clean all surfaces, scrape loose material = (15-20%), repair/replace all decayed and split trim work and siding = (25-35%), apply primer and topcoat to manufacturer's recommendations = (50%).

2. Rationale? The Parks and Recreation building is of historic significance with wood clapboards, molded fluted columns, capitals and pediments, and is one of Exeter's early schools occupied in a prominent location adjacent to the downtown area. The intent is to stop decay, repair wood trim areas, and paint the exterior with a high quality paint that will provide the longest lifespan attainable.

<p>1. General Project Description? Replace the 2 existing, 10 year old, 60% efficient Heating plant Boilers with Modulating, Commercial, 94% efficient, Condensing Natural Gas Boilers.</p> <p>2. Rationale? The proposed project has been recommended by a decision grade energy audit conducted by the NH Municipal Energy Assistance Program. The project is expected to provide an estimated 30% or greater energy savings in natural gas consumption. The two existing 10 year old boilers use 1 million BTU's each and are 60% efficient. Recommendations for replacement are due to high maintenance costs and low efficiency. Both boilers have had heat exchangers replaced, and are plagued with low voltage problems that damaged both boiler controls in Jan 2010 causing expensive repairs. Upgrading to 94% efficient condensing boilers will meet current efficiency standards and lower operating costs. The project will include Mechanical Engineering design prints and calculations at an approximate cost of \$8,500, with piping modifications of approximately \$6,000 for a total of 14,500 in other costs.</p> <p>3. Operating Budget Impact? The project is expected to provide an estimated 30% reduction, or approx. \$6,000.00 in annual natural gas savings, and approx. \$4,000.00 annual maintenance costs.</p>

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply)

Building Renovation, Addition, New Construction

Equipment New/Replacement

Real Property Acquisition

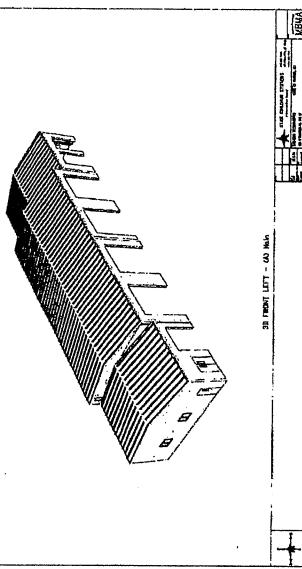

Road Improvements

Water/Sewer System Improvements

1. General Project Description? The project provides a 7 bay storage building for all Town departments. The space layout consists of a single open low bay area with partitioned evidence storage for Police, 2 high bay open areas for DPW Highway, a single high bay open area for the Fire Department, a single high bay open area for the Water/Sewer Department, and 2 low bay areas for Parks & Rec. The storage building shall consist of individual bays for each department and their individual uses.

2. Rationale? The current storage area Barn at the Simpson Property on Kingston Road is used for off season equipment storage. In winter that would include the sidewalk paver, flail mower with Trackless, asphalt roller, electronic sign boards, air compressors, Rec. mowers, and various summer equipment that totals an approx. investment of \$250,000+. The barn has been evaluated and is determined structurally unsafe for entrance when snow load conditions are present. The new building will be constructed on the Simpson site after the old building is raised. The pricing is based on a pre-engineered steel building selected to limit fire potential, and will include demolition of the existing barn. A site plan has been developed and is available for review. The new building is a 40' X 150' orientated with the building gable end facing the roadway to limit the profile within the surrounding area. The design features stepped roofs also to limit visual impact, and a trim package that softens the commercial exterior. A site plan has been designed, and an advisory Planning Board review will be conducted. Size and configuration was determined by input from each department, and various space needs studies.

3. Operating Budget Impact? W/S portion = \$41,250

<p>1. General Project Description? To provide preliminary design/engineering in support of the Coastal Grant application process for the upgrade and redesign of the river walk . The project is targeted to meet wetlands restoration, and waterfront development.</p> <p>2. Rational? The Riverwalk consists of a wooden walkway built in 1987 that is nearing the end of its life cycle. The walkway has been subject to damages from flooding events, and as a wood structure requires annual maintenance, with renewal every 20-25 years. It is recommended that the upgrade to a granite block seawall, with a brick walkway on top will be a continuation of the Stewart Park Seawall, and in support of the Town of Exeter Master Plan of a continuos walkway to Spring bridge. The granite block vertical wall configuration will lend itself to an increase in shorefront assessible area. Federal and State grant funding may be made available to provide wetland restoration and waterfront development.</p> <p>3. Operating Budget Impact?</p>

Proposed ("✓" all that apply)	<input type="checkbox"/> Building Renovation, Addition, New Construction <input type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition							
<p>1. General Project Description? Provide an analysis of cost, grant availability, and feasibility for a long term repair of the stone revetment areas of the Parkway that have become eroded and dislodged. Recommend an in depth study done by a contract engineer with waterfront experience and thorough knowledge of grant funding options, and permitting requirements.</p> <p>2. Rational? The Parkway Revetment consists of a stone liner to the riverbank. The Revetment has been subject to damages from flooding events, erosion and natural deterioration from ice and tidal currents. Continued erosion will begin to effect stone structures above the riverbank and add to the expense of repairs. Federal and State grant funding may be made available to provide assistance.</p> <p>3. Operating Budget Impact?</p>

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction

Equipment New/Replacement Real Property Acquisition

Road Improvements Water/Sewer System Improvements

1. General Project Description? Construct a sub-station for the Town of Exeter, Fire Department on the property purchased on Continental Drive to improve service and response time to the residents of the north and northwest sections of Exeter. This includes areas north of Rt. 101 and developments on Watson and Beech Hill Roads, as well as the new Exeter High School.

2. Rationale? The development of Exeter's second fire station has been on the department's major projects list for over 20 years. In 2001, Fire Scope Inc. conducted a study to look at possible station locations, and again in 2007 MMA Consulting Group Inc. was contracted to look at the effect on response times and the effective delivery of services both fire & EMS. During this study it was noted the Epping Rd. area is the most desirable location for the sub-station. The current location of the central fire station covers 52% of the town in the NFPA recommended standard of 4 minutes. The addition of a sub-station on Continental Dr. will improve this coverage to nearly 80% in 4 minutes. The initial proposed size for the sub-station is 14,000 sq. ft. with an estimated construction cost of \$175 per sq. ft., this equates to an estimate of \$2.45 million. With additional costs of bldg. design, site preparation and permitting, we are asking \$2.5 million.

3. Operating Budget Impact? The MMA Consulting Group, Study in 2007 indicated that the addition of a firefighter per shift would be required to properly staff both the existing downtown station and the Epping Road sub-station. The addition of 4 personnel, 1 per shift will increase the operating budget approximately \$300,000.

SAFER Grants (Staffing For Adequate Fire & Emergency Response) are available to help communities pay salaries and benefits of firefighters to better protect the community. The new fire station would be eligible for SAFER funds if the town wishes to apply for the funds. The SAFER program commits funds for 3 years for the additional firefighters at no cost to the taxpayers

Proposed ("✓ all that apply")	<input type="checkbox"/> Building Renovation, Addition, New Construction <input type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition <input type="checkbox"/> Road Improvements <input type="checkbox"/> Water/Sewer System Improvements																									
<p>1. General Project Description: Systematic paving and rehabilitation of Town roads.</p> <p>2. Rationale: Pavement represents the largest capital investment in the Highway Department. Maintaining pavements in the Town road network involves complex decisions about how and when to resurface or apply other treatments to maintain the road surface integrity and, at the same time, minimize operating costs. Simply paving the worst roads in Town is not a cost effective practice. Severely deteriorated roads need expensive rehabilitation and reconstruction methods. Paving a road that isn't yet in need of major reconstruction saves money long term. A pavement management system (PMS) strategically combines some road reconstruction with more preemptive methods to maximize the useful life the roads at a network level.</p> <p>3. Operating Budget Impact? In 2010 there was an approximate backlog of road repairs to be made of \$6.9 million dollars. The purpose of a PMS is not only to preserve the good roads we have, but to minimize this back log. The longer roads are allowed to deteriorate the more expensive the backlog becomes. This program assumes a 10.2% annual increase to reflect the observed inflation rate of asphalt pavement installations as analyzed in the 2010 Pavement Management Report.</p> <p>4. Cost Estimate - A level funded budget analysis was performed using the PMS to determine the funding level required to keep the average condition of the roadway network at 2009 levels. The department has been suggesting a budget of \$1,100,000 the last three years. Actual approved budgets has been less than this amount in all three years. The department still suggests an overall \$1,100,000 budget. It is anticipated that the FY13 budget will reflect the FY12 budget of \$600,000. The combination of the budget and supplemental paving will equate to \$1,100,000. The combined appropriation between budgets and CIP equated to \$850,000 for the last two years. Future year requests continue to assume that both the municipal budget and CIP request will be adjusted by roadway inflation costs using FY13 as the base. The complete 2010 Pavement Management Report can be viewed at http://www.town.exeter.nh.us/tm/Pavement%20Management%20Study%202010.pdf</p>

	<input type="checkbox"/> Road Improvements	<input type="checkbox"/> Water/Sewer System Improvements															
 <p>1. General Project Description: To correct deficiencies in the water, sewer and drainage utilities in Portsmouth Avenue. The project will also improve traffic patterns. Traffic signal improvements will better coordinate traffic flow.</p> <p>2. Rationale: Utility and roadway improvements are required from High St to the vicinity of the Provident Bank. The sewer main is in need of replacement because of structural failures. The design of the sewer improvements were originally completed in 2005. The drain lines are in a state of deterioration. Water services will be repaired with this project. Traffic flow will be improved by adjusting lane configurations and coordinating traffic signals throughout the corridor. In the spring of 2008, an asphalt shim was placed to preserve the road until construction could begin. Construction was moved from the original request of FY10 to allow time to investigate potential transportation safety improvements along the roadway and to allow the Jady Hill project to be constructed.</p> <p>3. Operating Budget Impact: Correcting problems under the road greatly increases the useful life of the surface of the road. Sewer main and drain line replacements along with water service repairs will reduce the number of emergency repairs.</p> <p>4. Cost Estimate: The project is now proposed in two phases. The first phase concentrates on sewer and water improvements. The sewer is in especially poor condition. The design consultant is reviewing this phase breakout and also reviewing potential unit cost increases since 2010. As of May 2012 there is a balance of \$36,515 from the design consultants contract of \$113,000. Cost assume a 13% contingency.</p> <table border="1"> <thead> <tr> <th>Phase I</th> <th>Phase II</th> </tr> </thead> <tbody> <tr> <td>Sewer Improvements</td> <td>Drainage Improvements</td> </tr> <tr> <td>\$ 940,000</td> <td>\$ 525,000</td> </tr> <tr> <td><u>\$ 180,000</u></td> <td>\$ 200,000</td> </tr> <tr> <td></td> <td>\$ 1,945,000</td> </tr> <tr> <td>Total</td> <td>Total</td> </tr> <tr> <td>\$ 1,120,000</td> <td>\$ 2,670,000</td> </tr> </tbody> </table>				Phase I	Phase II	Sewer Improvements	Drainage Improvements	\$ 940,000	\$ 525,000	<u>\$ 180,000</u>	\$ 200,000		\$ 1,945,000	Total	Total	\$ 1,120,000	\$ 2,670,000

PROJECT DESCRIPTION, RATIONALE & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction Equipment New/Replacement Real Property Acquisition

1. General Project Description?

String Bridge over the Exeter River connects the Library and Exeter Mills to downtown. String Bridge consists of two separate reinforced concrete bridges built in 1935; typical lifespan for such structures is approximately 70 years. NHDOT has provided a preliminary estimate for the study, design & rehabilitation of the bridges. Additional costs for maintenance or replacement of town-owned utilities are included below. The preliminary engineering study, to be conducted in 2013, will provide more detailed opinions of final design and construction costs. This project is eligible for 80% NHDOT grant money through the Municipally Managed Bridge program.

Note: Authorization/approval of the funding in the amount of \$1.13 million was received in at Town Meeting in 2008, which allowed the project to be placed into the NHDOT bridge improvements program. Actual availability of funds is not required until time of design and construction, and may require additional authorization. NHDOT has indicated that funding is not available until federal fiscal year 2015 (which starts Oct 2014), and is shown as one of ten bridge aid projects scheduled in FY2015. The costs shown below reflect a 3% rate of inflation.

2. Rationale? Existing conditions include concrete spalling, delamination and leaking joints which require rehabilitation. Engineering study will determine extent of rehab/reconstruction.

3. Operating Budget Impact? This one-time capital project will reduce spot maintenance.

Caption: View of north side of String Bridge and adjacent wingwall; current conditions show concrete efflorescence and deterioration at rail.

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT				
Proposed ("✓" all that apply)	<input type="checkbox"/> Building Renovation, Addition, New Construction <input type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition <input type="checkbox"/> Road Improvements <input type="checkbox"/> Water/Sewer System Improvements			
1. General Project Description?	This project will repair the large roadway culverts on Linden Street and Court Street; 1) Twin 48" metal arch culverts (1967) which carry the Little River under Linden Street and 2) Triple 51" metal arch culverts (1965) which carry Little River under Court Street. Over the years, flow through the culverts has eroded areas on the pipe floor, leaving the earth exposed. As water flows through these damaged areas soil under the culvert is experiencing significant undermining. Culvert walls are experiencing rusting and pitting with some sag in the roof. A consultant prepared an evaluation of the existing conditions, probe fixes and associated cost.			
2. Rational?	All state and municipal bridges in New Hampshire are inspected by the NHDOT at regular intervals based on the bridge's ownership and condition. Bridge condition is a concern to NHDOT, municipalities and the public. When conditions reach the status of structurally deficient, functionally obsolete, or Red List, consideration must be given to rehabilitation or replacement. Linden Street over Little River is a Red List Bridge on the NHDOT 2012 Bridge Inspection Report. Red List means that these bridges require more frequent inspections due to known structural deficiencies, poor structural conditions, weight restrictions, or the type of construction (i.e. temporary bridge). The Court Street culverts are included in this project due to their age (1965) and unknown extent of deterioration.

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction Equipment New/Replacement Real Property Acquisition Road Improvements Water/Sewer System Improvements

1. General Project Description: This project provides funding to reconstruct and repair deteriorated sidewalks.

2. Rationale: The sidewalk network in Town is about 35 miles and has had little or no funding for years. The Department had inspected the sidewalks in 2011. A sidewalk management program is being developed using this data and linked to the Town's GIS for infrastructure management.

3. Operating Budget Impact: A preliminary annual budget has been calculated at \$120,000. This budget utilizes sidewalk unit repair costs from 2011 and estimates of service life based on the type of sidewalk. The program will indicate priority areas based upon condition, the type of use, relationship to other capital and paving projects. These estimates will be further updated as the sidewalk management program is further developed.

PROJECT DESCRIPTION, RATIONALE & OPERATING BUDGET IMPACT

Equipment New/Replacement

Real Property Acquisition

Road Improvements

Water/Sewer System Improvements

1. General Project Description? This project is for improvements to Lincoln Street. It is broken into several phases. Phase I consists of watermain replacements and sewermain rehabilitations. This 2,200 ft. watermain is a key network main within the distribution system. This main increases in importance as a link between the storage tanks and the groundwater treatment facility and was rated highly on the upgrade list from the 2002 CDM Water System Study. Rehabilitation of 1,000 ft. of sewer mains as noted by the 2009 Inflow and Infiltration Study will occur with phase I. The watermains (750 ft.) and sewer lines (830 ft) on the side streets of Tremont and Daniel will be addressed at the same time. Watermain sizes will be increased from 6" to 12" on Lincoln St and from 4" to 6" on the side streets. Design for phase I should be complete by the Summer/Fall 2014. Construction could possibly begin in Fall 2014 or wait until school is finished in 2015.

Phase II involves street improvements from Front St. to Main St. Funding for conceptual and final design is requested in FY15. The southern section from Front St to north of Lincoln St school is fairly straight forward. However, the business district area from the Lincoln St school to Main St is much more complex. Traffic movement, parking accomodations and streetscape improvements will need to be balanced by the various businesses and stakeholders. Construction of the street improvements is proposed in FY16.

2. Operating Budget Impact?

FY14 Phase I Utility: \$ 954,000 - Water

\$ 196,000 - Sewer

\$ 1,150,000

FY15 Phase II Roadway Improvements Design: \$ 105,000 - Gen Fund

FY16 Roadway Construction: \$ 945,000 - Gen Fund

Total:

\$ 2,200,000

Preliminary project scoping and projects estimates were provided by a consultant.

PROJECT DESCRIPTION, RATIONALE & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation/Addition, New Construction

Equipment New/Replacement

Real Property Acquisition

Road Improvements

Water/Sewer System Improvements

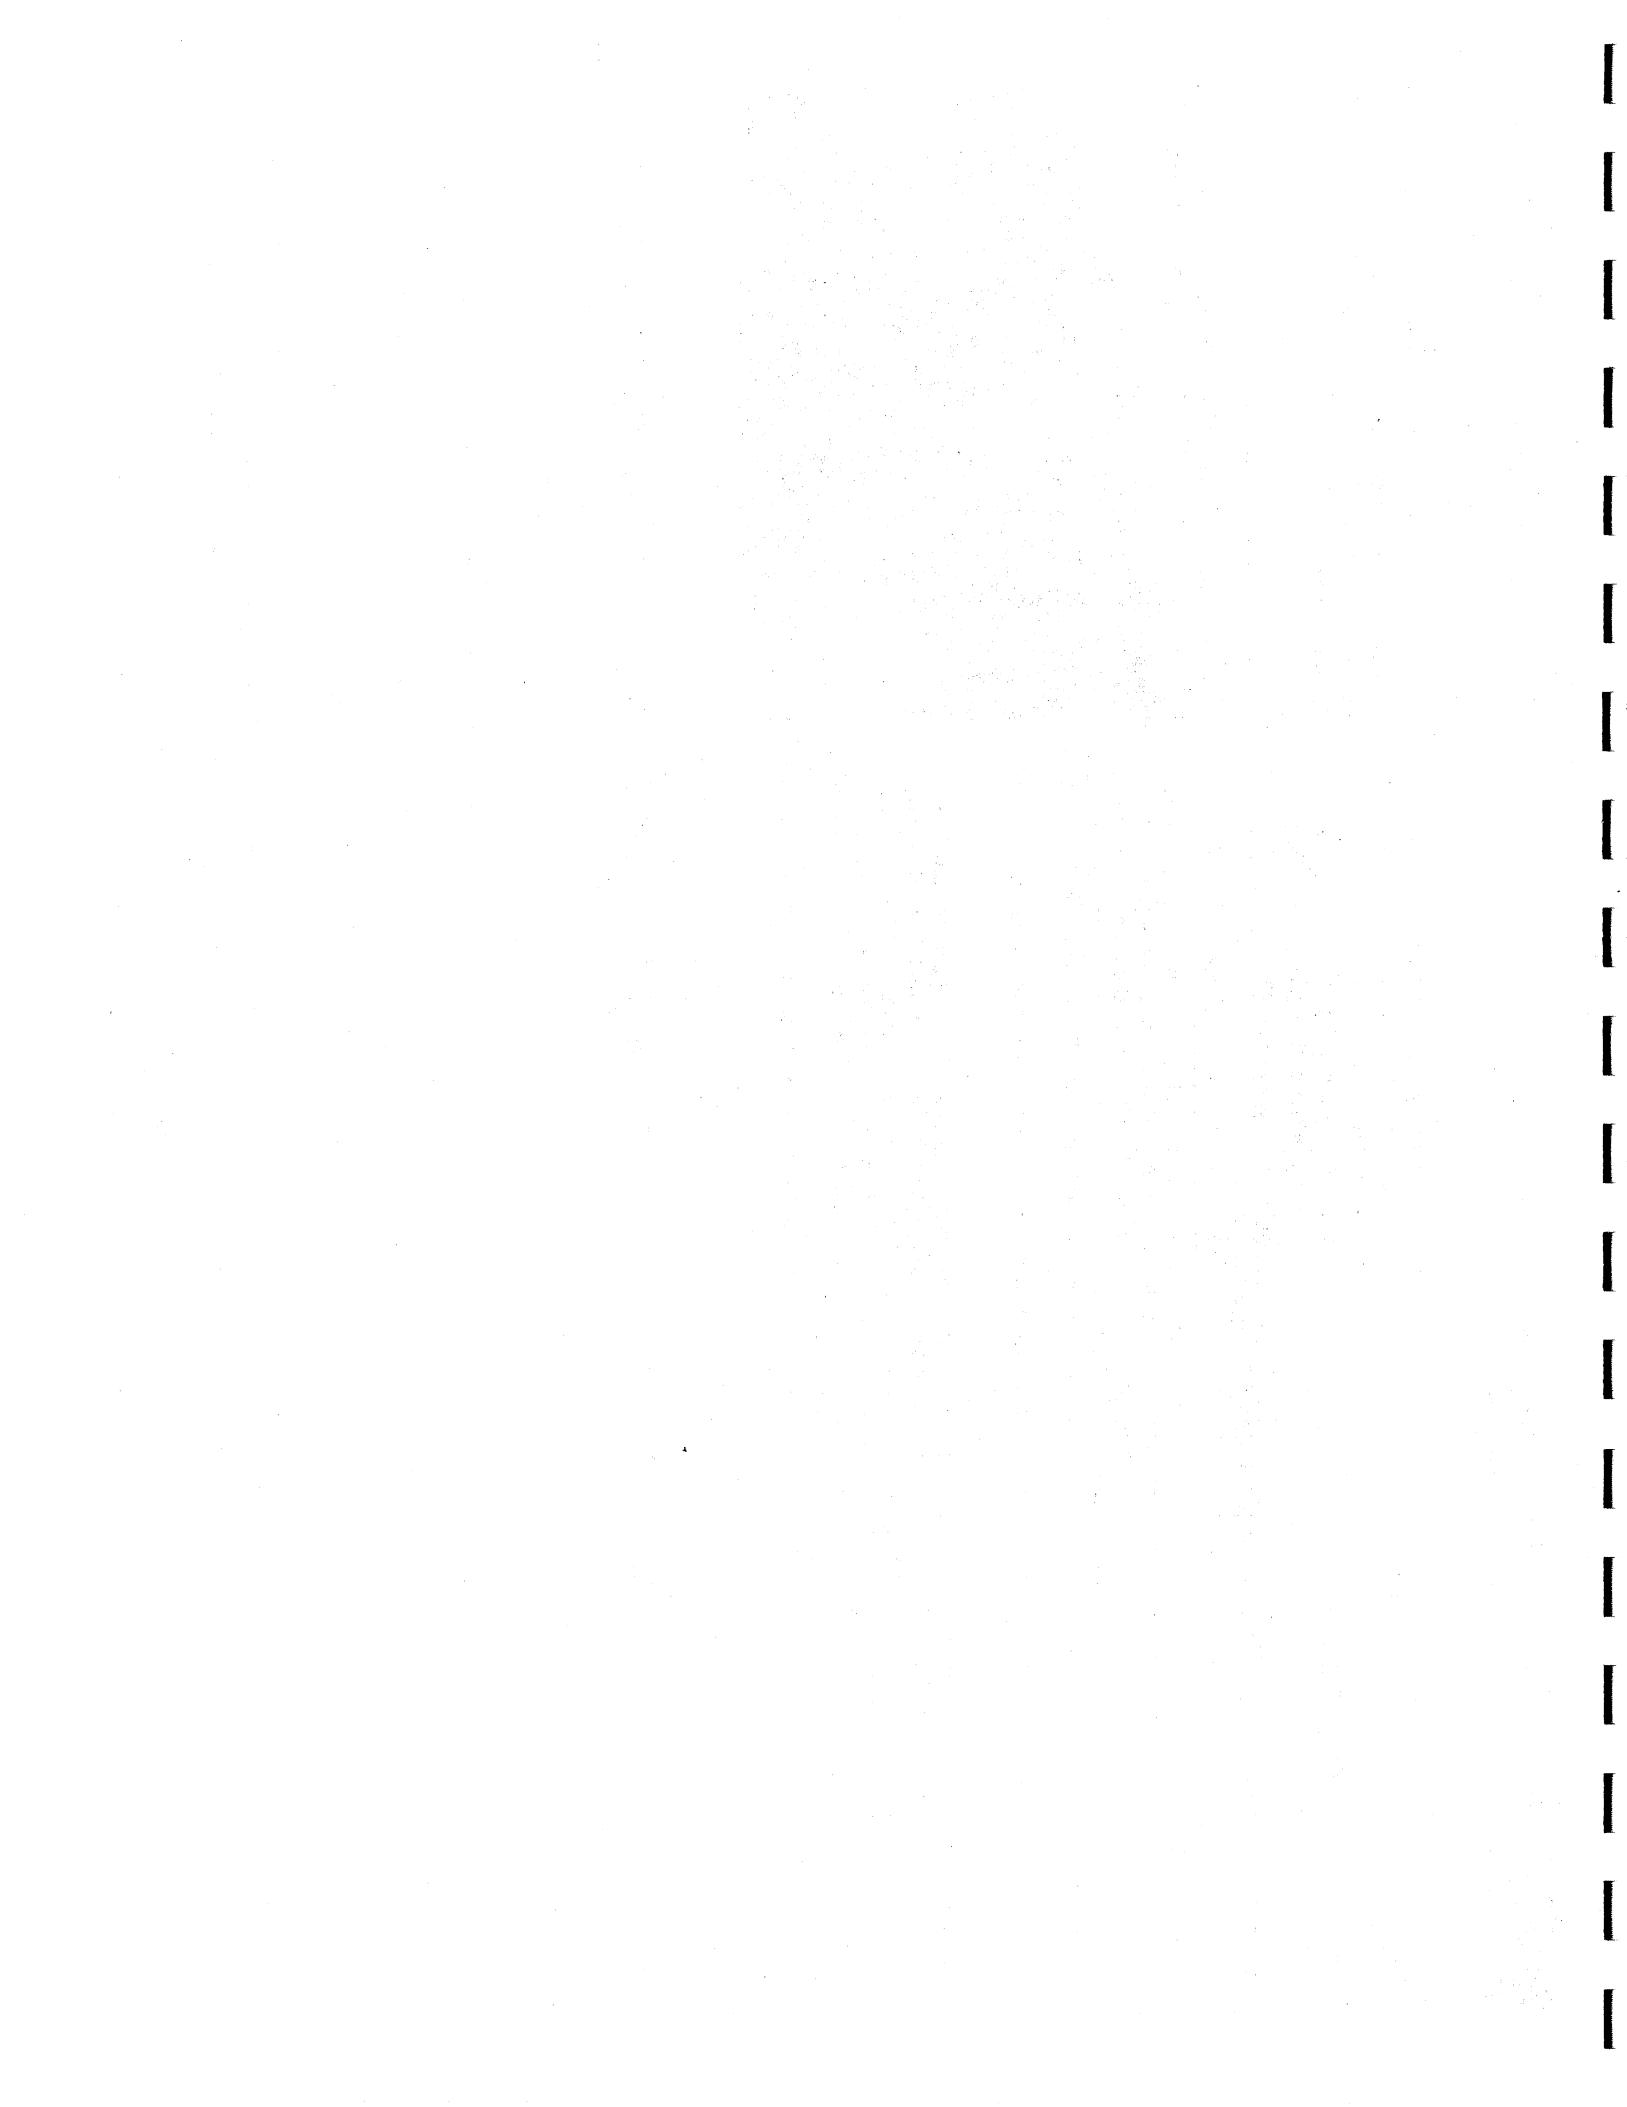

1. General Project Description? The Town is required to improve the discharge capacity of Great Dam to pass a 50-Year storm event. The River Study Committee has recommended the three foot crest gate and an enlarged sluice gate option. This project is on hold for the Town to explore the dam removal option. The dam removal investigations will be complete in the Fall 2012. Assuming that the Town decision will be in late 2012 or March 2013 and the modification design will last 9 to 15 months, the project may be bid at the end of 2014. This write-up plans for improvements to Great Dam if the Town eventually decides to keep the Dam.
 New Findings - Rainfall data is being updated because of climate change. The proposed modification alternative will be reviewed for adequacy with the new river flows.

2. Rationale? This project follows from the recommendations of the Exeter River Study Committee. The selected option was chosen as the best to achieve NHDES Dam Bureau requirements for discharge capacity; provide hydraulic capacity to allow management of impoundment levels during frequent precipitation events; and maximize the performance of the Great Dam fishpass. This project is an interagency cooperative effort which includes the Town of Exeter, three departments within NH Dept. of Environment (Dam Bureau, Watershed Management Bureau and the NH Coastal Program), and NH Fish & Game Department. \$377,000 was approved for design at 2008 Town Meeting.

3. Operating Budget Impact? Completion of modifications will reduce existing staff hours spent operating and monitoring the dam during storm events.

4. Basis of Cost - The project cost for the three foot crest option was inflated 2.5% annually from the 2007 consultant report to obtain the FY14 construction costs.

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%;">Proposed ("✓" all that apply)</td> <td><input checked="" type="checkbox"/> Building Renovation, Addition, New Construction</td> <td><input type="checkbox"/> Equipment New/Replacement</td> <td><input type="checkbox"/> Real Property Acquisition</td> </tr> <tr> <td></td> <td></td> <td><input checked="" type="checkbox"/> Road Improvements</td> <td><input type="checkbox"/> Water/Sewer System Improvements</td> </tr> </table> <p>1. General Project Description: On behalf of the town, the Conservation Commission acquired and maintains the Raynes Farm property on Newfields Road. As the largest remaining barn in Exeter, this resource provides a tangible link for modern day Exeter to its agricultural past. The open fields of Raynes Farm are frequented by local residents for passive recreation such as hiking, bird watching, kite flying, photography, and to explore the historic points of interest.</p> <p>In the years following acquisition, the Stewardship Committee and Conservation Commission have made great strides in implementing the recommended improvements identified in the long range development plan. With the exception of one non-load bearing section, the wall sills that were at risk have been repaired, water no longer runs down the hill and into the foundation, unstable support beams have re-set or replaced, a public parking lot was installed and most recently the Wiggin Gravesite was restored, a trail installed through the woods and an interpretive sign was placed at the parking area. Past efforts are evident because structurally the barn is quite sound and we are rewarded with an increase in public use of the property as more people discover the land. As more people learn of the site, we have benefited with an increase in an array of volunteer support for smaller maintenance projects from church groups, to scouts and students.</p> <p>At the time of acquisition it was known that long term maintenance would be a fiscal challenge yet through ongoing community support, funds from various sources and volunteer support have contributed to the barns improved condition. Caring for this investment was a commitment undertaken by the town upon acquisition and a part of that ongoing care requires funds for periodic maintenance. There has not been a large expense to the taxpayers for maintenance repairs to this site in over _____ years. Several needs have been identified as essential to maintaining the existing barn structure. These are proposed as a phased approach over the 6 year cycle.</p> <p>A. Replacement of Raynes Barn roof (*amount approx - DPW estimate) \$ 30,000* (FY13) B. Demolition of the silo connector, rebuilding of the barn opening, and final sill replacement \$ 40,000* (FY15)</p>				Proposed ("✓" all that apply)	<input checked="" type="checkbox"/> Building Renovation, Addition, New Construction	<input type="checkbox"/> Equipment New/Replacement	<input type="checkbox"/> Real Property Acquisition			<input checked="" type="checkbox"/> Road Improvements	<input type="checkbox"/> Water/Sewer System Improvements

2. Rational:

- A. The current barn roof was installed in 1991 and is over 20 years old. In winter storms of 2009 the deteriorated shingles blew off and a small portion of the roof was patched through an insurance claim. At 20 years we are at the maximum life expectancy for an asphalt shingled roof and at least two additional leaks have been noted. Though the full amount of replacement is being requested, the Conservation Commission also intends to apply for a Moose Plate grant which can offset the town's replacement expenses by up to \$10,000 if awarded. Showing contribution from the town during the application process will increase our ranking for the grant. With leaking roofs the number 1 killer of NH barns, the Conservation Commission believes replacing the barn is the best protection for the towns existing investment in this property.
- B. The Commission is also seeking funds in 2015 to replace the final sill and remove the silo room that serves as a structural connection between the barn and the silo. The floor boards of silo room are unsafe and since the room does not contribute to the functionality or historic integrity of the barn, the Commission feels maintaining the structure is unnecessary. We intend to time the removal of this structure with rebuilding of the final sill and the barn wall between the barn and the silo room. Because the wall is shadowed by the solo and is east facing, it has a fair amount of wood rot present and would be necessary eventually regardless of whether the solo room was removed or not. The Conservation Commission believes it can save some of the costs associated with this project by having volunteers demolish the connector room.

General Project Description: The Conservation Commission is requesting an annual allocation of \$50,000 initiating the year following the final Conservation Bond payment for the purposes of building a reserve to purchase priority conservation lands or easements.</p> <p>2. Rational: Though Exeter has been very proactive in acquiring properties for conservation, the Natural Resource Inventory completed in 2012 indicates that there are a number of areas where significant natural resources may be at risk. Purchase of conservation lands or easements are often opportunistic and though grants are available they often require matching funds. The Commission has been approached several times regarding several significant parcels but has not had the budget to fund the purchase, even partnering with other entities. As a result, opportunities to protect Exeter's significant resources can be lost. Building this fund allocation into the budget process is a logical way to plan ahead to ensure future success with continued natural resource protection.</p>

<p>1. General Project Description: This maintenance project is the rehabilitation of the existing one million gallon Hampton Road Water Storage Tower (located at Fuller Lane) by repainting the interior and exterior. It was last painted 17 years ago in 1995. On November 25, 2008, Underwater Solutions Inc. inspected the tank and reported it to be generally sound but in need of rehabilitation because of the large number of fatigued areas (pitting, caused by corrosion) that were found on the interior of the tank walls and the exterior of the tank. In addition the water tower roof surface coating is also getting relatively thin and needs to be resurfaced along with the floor panels having pitting and in need of rehabilitation. Rehabilitation involves media blasting to remove old paint and filling in the pits (voids in the metal created by the metal being dissolved by corrosion). Smaller pits can be repaired by filling them with epoxy material. Larger pits require more costly welding. Priming and painting is the last step.</p> <p>2. Rationale? Smaller pits become larger ones over time so cost increases the longer the project is deferred and if deferred too long can threaten the structural integrity. This project will extend the life of the existing standpipe by an estimated 20 years and safely allows the Town to retain the benefit of optimal water storage for fire fighting and domestic demand. Four quotes were received in 2008 for the rehabilitation project.</p> <p>3. Operating Budget Impact? This project could be eligible for SRF Funding (State Revolving Fund)-typically a 20% payback</p>

Contact:	Paul Vlasich	Estimated Useful Life (Years):	50
Phone:	778 - 0591 ext. 160	Previously Presented? (Yes/No)	Yes
e-Mail:	Dvlasich@town.exeter.nh.us	When (Please give year):	2006
Growth Related? (Yes/No):	Yes		

PROJECT DESCRIPTION, RATIONALE & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction Equipment New/Replacement

Real Property Acquisition Road Improvements Water/Sewer System Improvements

1. General Project Description? The watermain rehabilitation program was initially established in FY10. Funds for that year were earmarked for watermain improvements in the Jady Hill area and the Summer St RR crossing. Construction of those projects is slated for 2011. Large portions of the Town's water system are over 100 years old. Although improvements and repairs to the system have been completed over the last century much of the system is beyond the anticipated useful life and is in need of replacement and/or repairs. Public Works staff has prepared a proposed pipe line replacement list. This list takes into consideration pipe age, condition, and hydraulic capacity. The attached sheet shows the currently known watermains in need of replacement. In addition, individual projects will include, where appropriate, other sewer and drain rehabilitation/replacement projects and budgets. The initial recommendation of the rehabilitation program suggested expenditures of \$1,400,000 every other year for 20 years to replace the deficient pipes.

2. Rationale? The department proposes to continue this program that was suggested by the CDM Water System Study completed in 2002. One of the initial recommendations of the Water Study was to upgrade the main on Lincoln St. There is a separate FY14 CIP proposed for the Lincoln St area watermains. The replacement of the Winter St watermain from Columbus Ave to Main St is proposed to meet the program expenditures. Winter St has experienced many water breaks and exhibits very poor hydraulic characteristics. The Winter Street replacement project replaces 1,240 ft of 6" cast iron watermain. Project design will be finished in Summer 2014 with possible construction in Fall 2014 or Spring 2015. Future projects will be generated from the replacement list.

3. Operating Budget Impact? \$1,400,000 - Program Funding
 \$ 954,000 - Lincoln St, Tremont, and Daniel watermain project (Separate CIP white-up)
 \$ 446,000 - Winter Street Project

<p>1. General Project Description? In 2008, the funding for the Infiltration and Inflow (I/I) Program was used to update the 1998 CDM Phase I & II Sewer System Evaluation Study to reflect current conditions and include improvements such as the Court Street and Water Street stormwater separation projects. The 3rd phase of the program, Infiltration & Inflow Study, is being conducted at this time by Underwood Engineers Inc. This will include the development of a long-term control plan for the abatement of I/I and combined sewer overflows. The efforts now are to eliminate other private and public I/I problems. Some areas have been specified by previous studies. Priorities are determined according to the estimated I/I flows, pipe condition and flows and road. The Water/Sewer Department periodically perform condition assessments with pipeline inspection equipment acquired in 2005. As the needs are prioritized, we will also coordinate with the various utilities and road repairs.</p> <p>The I/I Abatement Program is expected to be an ongoing effort to decrease treatment costs and eliminate combined sewer overflows. The Town is under an EPA Administrative Order to address sewer overflows. The Town has committed to finishing the I/I study and submitting it to EPA as the Long Term Combined Sewer Overflow Control Plan by December 2012. The department has recently installed additional monitoring devices to better evaluate/monitor sewer and CSO flows and will proactively monitor the system. It is anticipated that the final report will recommend additional projects to fix I/I related problems. Once these projects are defined, future project costs can be estimated for out-lying years.</p>

Proposed ("✓" all that apply)	<input checked="" type="checkbox"/> Building Renovation, Addition, New Construction <input type="checkbox"/> Equipment: New/Replacement	Real Property Acquisition	<input type="checkbox"/> Road Improvements	<input checked="" type="checkbox"/> Water/Sewer System Improvements				
<p>1. General Project Description? The maintenance project shall consist of the replacement of the Wastewater Treatment Plant boiler. The existing boiler shall be removed and replaced with a 98% efficient natural gas condensation unit. Piping, and air handlers (HVAC), and associated heating zones shall be calculated and designed to provide maximum efficiency of operation.</p> <p>2. Rationale? The existing boiler is original equipment to the building, was oil fired, and converted to Natural Gas. The boiler is well beyond the recommended life expectancy provided by the manufacturer. A failure would make it necessary to conduct an emergency replacement under load without the opportunity to correct and improve efficiency. As this boiler heats the Wastewater Treatment Building, a failure during heating season would be detrimental to the Wastewater Treatment Plant chemicals, process monitoring, and laboratory testing reagents.</p> <p>3. Operating Budget Impact? The recommendation upgrades the Boiler, HVAC equipment, zoning corrections, insulation, and controls will enable an anticipated energy reduction of approximately 30% of the annual heating/cooling costs.</p>

Project Description?	This sewage lift station building and pumps are at 28 years of age with the building in poor condition. The station requires a complete replacement. The two obsolete pumps would be replaced with the Town's specified Gorman-Rupp manufactured pumps which are modern and better designed. The two pumps are very problematic and require frequent overtime due to clogging by materials such as large plastic and cloth products. Other existing Town Gorman-Rupp pump stations routinely pump these same materials. This station requires a rapid response should there be pump or control failures as a sanitary sewer overflow (SSO) could occur to the Exeter River at a point upstream of the Town's drinking water intake. Many of the River Bend Circle residences have basement sump pumps that rapidly fill the wet well during major weather events. The recent EPA administrative order (AO) required a 'Collection System Self Assessment' and this station has been documented as being the most prone to fail with a potential SSO resulting. The EPA AO currently does not fine the Town for SSO events, but, will do so if sewage collection system improvements, such as this proposed replacement project, are not instituted within a reasonable time frame.				
Rationale?	This project will provide a new more secure building and lift pumps with higher reliability and better protect the public health and welfare and the Town's summer water supply source. This project would also reduce the probability of SSOs and the likelihood of EPA fines being levied against the Town in the future.

<p>1. General Project Description? This will include the development of a long-term control plan for the rehabilitation or replacement of sewer mains. Public Works staff has prepared a preliminary sewer pipe line replacement schedule that consists of replacing about 13,000 linear feet or about 2.5 miles. The pipe sizes range from 8" to 15" sewer main replacements. The total cost of the pipeline replacement is estimated to be \$4.2 million dollars. We recommend a 10 year replacement program, requesting \$850,000 thousand dollars every other year. This schedule considers pipe age, condition, and hydraulic capacity. In addition, the schedule will take into account the Pavement Management Schedule, water and drainage rehabilitation/replacements and budget.</p> <p>Sewer line replacements occurred in the Jady Hill area in 2011 and 2012. Several sewers in Lincoln Street anticipated to be corrected with the proposed FY14 watermain project. Portsmouth Avenue sewer fixes are scheduled for 2013. Sewer replacement funds are requested in 2014 with specific project locations yet to be determined.</p> <p>2. Rationale? Various project areas have been identified through routine maintenance inspections and sewer line failures. Additional replacement/rehabilitation areas were indentified by the 1998 CDM Phase I & II Sewer System Evaluation Studies. A current plan of future projects are shown on the attached sheet.</p> <p>3. Operating Budget Impact? Reduces inflow and infiltration into the collection system which results in less treatment costs. Maintenance crews will spend less time and dollars on emergency repairs.</p>

<p>1. General Project Description? In 2002, Underwood Engineering performed a Capital I Improvements Program study for the WWTP. The majority of improvements was identified as maintenance projects, and should be budgeted for as part of the routine budget planning. (Sludge removal, equipment replacement) A report by Underwood Engineering was done in 2005 to estimate the amount of sludge volumes and disposal costs at various solids contents present in the WWTP lagoons. Sludge disposal costs vary significantly depending upon the actual solids concentration of the sludge and the accuracy of the sludge depth measurements. The report shows the amount of sludge in each lagoon and estimated costs for removal.</p> <p>The report recommends:</p> <ul style="list-style-type: none"> -Budget a min of \$1.3 million for sludge disposal costs until more accurate information (2005 figures) -Perform sludge sampling to determine % solids of the sludge -Conduct sludge testing for chemical concentrations to determine sludge disposal options -Conduct additional sludge depth measurements (using grid system) in each lagoon <p>The request is for \$1,747,091 in 2015, and was calculated by adding an annual rate of inflation of 3.2% since 2002. Updated sludge levels are reported through the Solarbee Company. The sludge levels don't appear to be any worse than the previous report due to the new Solarbee aerators dispersing the sludge more evenly and better sludge decomposition. The new NPDES permit and the decisions on the new WWTP will dictate what needs to be done to the lagoons in the future.</p> <p>2. Rationale? The project is an anticipated requirement of the NPDES permit renewal!</p> <p>3. Operating Budget Impact?</p>

<p>General Project Description: Replace the existing Maintenance vehicle Van #6 which is used by the Electrician. The van was originally purchased in 2000 for \$15,751 after \$1,500 trade-in. The recommended useful life is 8 years according to the Town of Exeter Vehicle Replacement Schedule (VRS), and is currently delayed by 4 years. The vehicle repairs have been routine maintenance. It is currently the oldest vehicle in the Maintenance Fleet, has about 62,000 miles, and is designed for towing and carrying capacities. The condition, age, and 60,000 stop and go miles put the vehicle in a state of diminished return. Rust and general maintenance costs have begun to exceed the value of the vehicle.</p> <p>Rationale: The Maintenance Electrician Van is an essential vehicle to the Maintenance operation as it requires a covered vehicle to protect electrical test equipment and electrical components, and is stocked with tools and equipment for emergency trouble calls, and the servicing all Municipal buildings. It is used daily to respond to routine maintenance calls, and to augment contractor's efforts to keep contracts within scope and pricing.</p> <p>Operating Budget Impact: Vehicle replacement price is based on "2012 Model Year Vehicle Index" from State of NH Administrative Services Bid List. This price does not reflect a trade that will be pursued at time of purchase.</p>

<p>1. General Project Description? Replace the existing Maintenance vehicle Truck #4 which is used by the Carpenter. The truck was originally purchased in 2001 for \$14,954 after \$500 trade-in. The recommended useful life is 8 years according to the Town of Exeter Vehicle Replacement Schedule (VRS), and is currently delayed by 3 years. The truck has been delayed an additional 2 years due to the truck's good condition. The vehicle repairs have been routine maintenance.</p> <p>Rationale: This truck, used by the DPW Maintenance Carpenter, is an essential vehicle within the Maintenance Team for all Town Buildings and Structures. It is used for hauling building materials, and miscellaneous cargo requiring an open pickup truck. The vehicle is also used to carry tools and equipment to support the Carpentry trade.</p> <p>Operating Budget Impact: The price was developed from the "Grappone Ford" state bid from July 2011 + 4.5% inflation rate. Current vehicle has about 37,000 miles; miles per gallon: (V6 & 4 X 2)-16 city/ 23 highway and (V8 & 4 X 2)-13 city/ 21 highway; (V6 & 4 X 4)-15 city/ 21 highway and (V8 & 4 X 4)-12 city/ 19 highway</p>

Project Description: Replace the existing Maintenance vehicle Van #12 which is used by the Plumber for Plumbing/HVAC Utilities. The van was originally purchased for \$18,115 after \$300 trade-in. The recommended useful life is 8 years according to the Town of Exeter Vehicle Replacement Schedule (VRS). The vehicle repairs have been routine maintenance with mileage in the 45,000 mile range. The vehicle is designed for towing and carrying capacities																																																																				
Rationale: The replacement of the Plumbing/HVAC Van at this time will minimize the diminished return on investment. The overall condition is in decline due to age, rust, and daily use. The van provides daily transportation for the service calls and preventive maintenance for all building heating, cooling, plumbing, and gas utilities work. It is recommended that a trade-in at this juncture will capture residual value to credit towards the purchase price of a replacement. The Plumbing/HVAC trade requires a covered vehicle to protect tools, parts/fittings, and equipment needed to respond to plumbing and heating emergencies and routine maintenance for all municipal buildings.																																																																				
Operating Budget Impact: Vehicle replacement price is based on "State Bid" pricing schedule of July 2011 + 4.5% inflation rate. This price does not reflect a trade that will be pursued at time of purchase.

<input type="checkbox"/> Equipment New/Replacement	<input type="checkbox"/> Real Property Acquisition	<input type="checkbox"/> Road Improvements	<input type="checkbox"/> Water/Sewer System Improvements																																											
<input type="checkbox"/> Building Renovation, Addition, New Construction																																														
Proposed ("V" all that apply) <input type="checkbox"/> Building Renovation, Addition, New Construction 1. General Project Description? Replace 1994 - 110' Ladder Truck with new. We recommend purchase of a new 100' ladder truck. This ladder will be equipped with a 1500 GPM pump so that it can be self-supporting and not need to rely on a second engine from our department to provide water for elevated streams. 2. Rationale? This vehicle is in service today and is beginning to show signs of age. The body beginning to rust and we are in need for additional maintenance on the ladder itself. We have spent over \$15,000 in each of the past 3 years (FY09-FY11) for necessary repairs to keep the unit in service, and the ladder was out of service for 3 months this year , as \$25,000 was spent to repair to the aerial ladder and water way in 2012. Ladder trucks are a key piece of equipment for the town's fire protection, as its main purpose is to save lives. When our ladder is out of service we rely on communities like Hampton, North Hampton and Amesbury to provide a ladder. The ladder truck provides a solid work platform for firefighters to rescue trapped occupants and safer to operate on the roof and the scene of a building fire. The ladder is 18 years old and could be sold as is, but more likely will be traded in to the manufacturer. 3. Operating Budget Impact? A new vehicle would likely reduce the operating budget, as new vehicle warranties and reduced maintenance costs would be realized. \$18,000 was added to the FY12 budget for repairs to the water way. Improvements in vehicle engines and emissions have reduced fuel consumption and lessened the carbon output as compared with existing older vehicles. We recommend looking into a 10 year lease/purchase or bonding.

<p>1. General Project Description? Replace 2005 Ford Crown Victoria sedan with new 4 or 6 cylinder midsize 4WD SUV, most likely a Ford Explorer or Jeep Liberty style vehicle. This vehicle is currently serves as department head transportation and occasionally the command post at emergency incidents. It is used respond to emergency incidents and to move personnel to emergencies, practical training exercises and classes.</p> <p>2. Rationale? The 7 year old Sedan has over 79,000 miles and is nearing the end of its life as an emergency response vehicle. It could however be used as a non-emergency vehicle within the town as necessary. As the vehicle ages it will be more difficult to predict service & maintenance needs. With any older vehicle unexpected costs in addition to routine maintenance always has the potential to be higher than budgeted in the operating portion of the budget.</p> <p>3. Operating Budget Impact? A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines, including hybrid vehicles, have increased fuel mileage and reduced fuel consumption, as compared with existing older vehicles. We are currently looking into a 3 year lease/purchase as well as a standard purchasing options, in an effort to create a more level budget.</p>

<p>1. General Project Description? Replace a 2001 Ford Crew Cab Pick-up with new. This vehicle is currently serves as a response vehicle as well as a utility vehicle. The vehicle is used to transport emergency response trailers, such as the Hazardous Materials trailer, Special Rescue trailer, and trailers used by the Exeter All-Hazards Health Region as well as personnel to and from emergency scenes and training evolutions. The vehicle also is necessary to pick-up equipment used at emergency scenes and return it to the station to be placed back in service.</p> <p>2. Rationale? The 11 year old vehicle has over 96,000 miles and is becoming more difficult to predict service & maintenance needs. With any older vehicle unexpected costs in addition to routine maintenance always has the potential to be higher than budgeted in the operating portion of the budget.</p> <p>3. Operating Budget Impact? A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines, have increased fuel mileage and reduced fuel consumption, as compared with existing older vehicles. We are currently looking into a lease/purchase as well as a standard purchasing options, in an effort to create a more level budget.</p>

<p>1. General Project Description? Replace 2007 Ambulance with new.</p> <p>2. Rationale? This vehicle is in service today. With the ever increasing EMS call volume, nearly 1,800 calls per year, it will be very important to keep on a regular vehicle replacement schedule to have reliable ambulance service for the residents and visitors of Exeter. The vehicle after 7 years still has a moderate trade-in value creating the best value for the Town of Exeter.</p> <p>3. Operating Budget Impact? The desire is to have this vehicle funded from the Ambulance Revolving Fund created by the affirmative vote on Article 35 at the 2007 town meeting. The BOS needs to approve the transfer of funds into this account, and if approved the purchase of this vehicle would have no impact on the tax rate. It would be paid for by the users of the ambulance. A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines and emissions have reduced fuel consumption and lessened the carbon output as compared with existing older vehicles.</p>

(Yes/No): No	Request Results from ("✓" all that apply) <input checked="" type="checkbox"/> Schedule Replacement <input type="checkbox"/> Present Equipment Obsolete <input checked="" type="checkbox"/> Replace Worn-Out Equipment <input type="checkbox"/> Expanded Services <input checked="" type="checkbox"/> New Operation <input checked="" type="checkbox"/> Improved Efficiency/Procedures <input type="checkbox"/> Other-Explain <input checked="" type="checkbox"/> Deemed Critical by Department
PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT Proposed ("✓" all that apply) <input type="checkbox"/> Building Renovation, Addition, New Construction <input checked="" type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition <input type="checkbox"/> Road Improvements <input type="checkbox"/> Water/Sewer System Improvements			
<p>1. General Project Description? Replace 1993 International Bucket Truck with a new Ford F-550 and 45' lift.</p> <p>2. Rationale? This vehicle is in service today and is starting to show signs for rust and age. The lift has begun to require additional maintenance to keep certified. As the town continues to grow the fire alarm system will continue to keep up with growth thus requiring additional hours on the vehicle and increased service & maintenance costs. This vehicle is shared with the Public Works Dept. for street light service and bulb replacement and when an elevated platform is necessary.</p> <p>3. Operating Budget Impact? A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines and emissions have reduced fuel consumption and lessened the carbon output as compared with existing older vehicles. We are currently looking into a 5 year lease/purchase as well as a standard purchasing options, in an effort to create a more level budget.</p>

<p>1. General Project Description? Replace the 1997 Pierce Quantum Pumper (Engine 1) with a new 1500 GPM engine.</p> <p>2. Rationale? This vehicle is in service today and is starting to show signs for rust and age. The pumper is in need of \$20,000-25,000 of body work in FY 2013 to keep the rust at a minimum and the unit in service for the next 5 years. The engine and drive train seem healthy at this time but continued use and age will begin to deteriorate the systems and increase service & maintenance costs.</p> <p>3. Operating Budget Impact? A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines and emissions have reduced fuel consumption and lessened the carbon output as compared with existing older vehicles. We would recommend a 5 year lease/purchase as with previous engines to keep a level town operating budget. When this unit is replaced current leases for Engine 3 (2007) and Engine 2 (2010) will be paid.</p>

2013 - 2018 CIP Vehicle/Equipment Request

Date Submitted: May 21, 2012
 Year Funding is Requested:

Department: Fire Project Title: Ambulance 2 - Replacement Contact: Brian Comeau 773-6127 bcomeau@town.exeter.nh.us Phone: e-Mail:	Priority (1 of 8, etc.): 1 of 2 Estimated Total Cost: \$ 196,807 Estimated Useful Life (Years): 6 Previously Presented? (Yes/No) : No When (Please give year): Growth Related? (Yes/No): No	Request Results from ("✓" all that apply) <input checked="" type="checkbox"/> Schedule Replacement <input type="checkbox"/> Present Equipment Obsolete <input type="checkbox"/> Replace Worn-Out Equipment <input type="checkbox"/> Expanded Services <input type="checkbox"/> New Operation <input type="checkbox"/> Improved Efficiency/Procedures <input type="checkbox"/> Other/Explain <input checked="" type="checkbox"/> Deemed Critical by Department																																																																																																																																	
PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT																																																																																																																																			
<p>Proposed ("✓" all that apply) <input type="checkbox"/> Building Renovation, Addition, New Construction <input checked="" type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition <input type="checkbox"/> Road Improvements <input type="checkbox"/> Water/Sewer System Improvements</p> <p>1. General Project Description? Replace 2005 Ambulance with new.</p> <p>2. Rationale? This vehicle is in service today. With the ever increasing EMS call volume, nearly 1,800 calls per year, it is very important to keep on a regular vehicle replacement schedule. This is necessary to have reliable ambulance service for the residents and visitors of Exeter. This vehicle is a primary response vehicle and we have seen an increase in out-of-service time and increased maintenance cost as the vehicle ages. The vehicle after 7 years still has a moderate trade-in value creating the best value for the Town of Exeter.</p> <p>3. Operating Budget Impact? The desire is to have this vehicle funded from the Ambulance Revolving Fund created by the affirmative vote on Article 35 at the 2007 town meeting. The BOS needs to approve the transfer of funds into this account, and if approved the purchase of this vehicle would have no impact on the tax rate. It would be paid for by the users of the ambulance. A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines and emissions have reduced fuel consumption and lessened the carbon output as compared with existing older vehicles.</p>

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT																																																																																																								
<p>Proposed ("√" all that apply)</p> <p><input type="checkbox"/> Building Renovation, Addition, New Construction <input type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition <input type="checkbox"/> Road Improvements <input type="checkbox"/> Water/Sewer System Improvements</p> <p>1. General Project Description? Replace a 2008 Ford Expedition with new energy efficient vehicle Ford Expedition 4 x 4. We have looked at vehicles with increased fuel mileage and reduced fuel consumption, as compared with existing older vehicles. The current vehicle currently serves as the command post at emergency incidents and is used to move personnel to emergencies, practical training exercises and classes. The vehicle must be fuel efficient, but also large enough to fit 4 personnel with all associated protective equipment & turnout gear, and serve as a command post at emergency scenes.</p> <p>2. Rationale? The 10 year old vehicle is becoming more difficult to predict service & maintenance needs. With any older vehicle unexpected costs in addition to routine maintenance always has the potential to be higher than budgeted in the operating portion of the budget. New vehicles we are looking at include 6 cylinder flex fuel, fuel efficient diesel, and hybrid electric/gasoline vehicles such as the Ford Expedition or Chevrolet Tahoe. Keeping economy and environment in mind, newer vehicles are more fuel efficient and produce less harmful carbon output into the environment.</p> <p>3. Operating Budget Impact? A new vehicle would likely reduce the operating budget as new vehicle warranties and reduced maintenance costs would be realized. Improvements in vehicle engines, including hybrid vehicles, have increased fuel mileage and reduced fuel consumption, as compared with existing older vehicles. We are currently looking into a 3 year lease/purchase as well as a standard purchasing options, in an effort to create a more level budget.</p>

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction Equipment New/Replacement Real Property Acquisition Road Improvements Water/Sewer System Improvements

General project description: This truck is a 1997 International 4900 3-axle dump truck used by the Highway Department for winter and summer maintenance of town roads. This truck was originally purchased in 1997 for \$57,780.18. This truck is past its useful life and unreliable. The total maintenance cost is \$42,868.50 and the dealer does not stock many parts making them more expensive and causing a longer down time. The Highway Department's dump trucks have sand and salt units on them and they are first responders when the roads are icy. This truck no longer has a dump body installed on the frame and chassis. The dump body is too corroded to maintain. The sand and salt unit has been mounted directly to the frame and chassis to at least pass inspection for use in winter 2012-2013, but now is limited only to snow fighting activities. Accidentally the highway fleet is down 1 dump truck during the summer months. The direct mounting of the sand and salt unit to the frame and chassis will only accelerate the aging of these critical infrastructure pieces of the truck rendering the truck non-inspectable. The longer we keep the truck the more it will cost to operate.

Rationale: This truck is a 1997 International that responds to winter emergencies only, it has passed its useful life by 5 years.

Operating budget impact: This price is from 2011 Liberty International bid + 4.5% inflation rate. This price does not reflect a trade. Current vehicle has about 7,150 hours.

Item to be Replaced:

Make/ Model	International 4900
Year	1997
FY 11 Maintenance Cost	\$2,458.00

2013 - 2018 CIP Vehicle/Equipment Request

Date Submitted: June 25, 2012
 Year Funding is Requested: 2013

Department: Public Works
Project Title: Replace Car #1 with Jeep Liberty 4 X 4
Contact: Jennifer Perry
Phone: 778 - 0591 ext. 161
e-Mail: jperry@town.exeter.nh.us

Priority (1 of 8, etc.): 2 of 3
Estimated Total Cost: \$ 17,875
Estimated Useful Life (Years): 6
Previously Presented? (Yes/No): yes
When (Please give year): 2010
Growth Related? (Yes/No): no

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction Equipment: New/Replacement Real Property Acquisition Road Improvements Water/Sewer System Improvements

Project Description: Replace the existing 2002 sedan (60,000+ miles) with a light duty all wheel drive vehicle. Car #1 is used mainly by the Director and is considered a first response vehicle and needs to be able to respond in all types of emergencies in all types of weather conditions. It is also used by the whole Department when a reliable vehicle is needed to travel out of town for business or training. The existing sedan was originally purchased for \$15,000 after \$813 trade-in. The recommended useful life is 6 years according to the Town of Exeter Vehicle Replacement Schedule (VRS), and replacement is currently delayed by 4 years.

Rationale: Reasons for replacement at this time include vehicle condition, age, and fuel economy. Condition: rust is present underneath and in the inner front right wheel well near the engine mounts (this is bad and could develop into safety issue which would remove the vehicle from service); additional rust is developing on the rear quarter panels; the vehicle has had some major suspension and brake work done; and the mechanics have noted that the transmission may need work. Age: the vehicle will be 11 years old next year and will have exceeded its recommended useful life by 5 years. Fuel economy: This is a small 4 to 6-cylinder SUV and will be more fuel efficient; the 2013 Jeep Liberty is 15 mpg city/21 mpg highway.

Operating Budget Impact: Maintenance and fuel costs will be decreased with the new vehicle. This price is from Fire Department 2013 CIP vehicle replacement schedule; and does not reflect a trade.

Item to be Replaced:

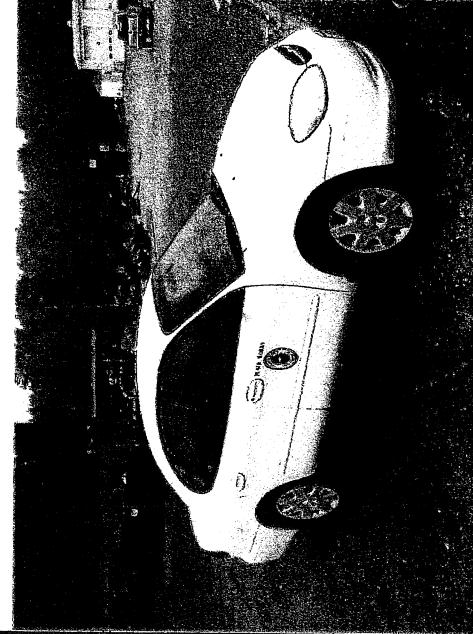

Make/ Model	Ford Taurus

<p>Although it will be our #2 vehicle with the purchase of 2006 1 ton, it gets tough miles and carries heavy loads. We also use it to trailer mowers from site to site. We need 2 good vehicles with sith our summer help and two full time employees. This vehicle has had its share of thing go wrong over the years, more than I believe it should have. With the extensive use of our 2006 for plowing now, it is wearing out much faster than expected, making this vehicle more important.</p>																																																			
<p>The back end has been rusting out since December 2010 as noted by Public Works in one of their maintenance checks.</p>																																																			
<p>Mileage: 72,750⁺</p>

<p>1. General Project Description? Replace the existing Water & Sewer John Deere Backhoe #53. This John Deere Backhoe was originally purchased in 2000 for \$74,500 after \$17,500 trade-in. The recommended useful life is 12 years according to the Town of Exeter Vehicle Replacement Schedule (VRS), and is currently scheduled for replacement, but has been delayed 2 years due to the backhoe's good condition. Although the backhoe repairs have been routine maintenance, a major repair in 2010 for \$4,404 is an indication that more major repairs will be necessary to ensure proper working function. The variety of uses of this backhoe makes it an essential piece of the fleet that the Town of Exeter can't afford to have malfunction at critical moments.</p> <p>2. Rationale? This vehicle is the main Water & Sewer Vehicle used during everyday activities, water & sewer breaks.</p> <p>3. Operating Budget Impact? The price was developed using the original cost plus a 4.5% inflation from year of purchase (DPW Vehicle Replacement List); Current vehicle has 3,381 hours on new hour meter, and had 3,331 hours on old hour meter for a total of 6,712 hours; This price does not reflect a trade</p>

2013 - 2018 CIP Vehicle/Equipment Request

Date Submitted: June 28, 2012
 Year Funding is Requested: 2015

Department: Public Works - Water
Project Title: Replace 1/2 Ton Truck #3
Contact: Michael Jeffers
Phone: 778 - 0591 ext. 165
e-Mail: mjeffers@town.exeter.nh.us

Priority (1 of 8, etc.): 3 of 6
Estimated Total Cost: \$ 17,687
Estimated Useful Life (Years): 8
Previously Presented? (Yes/No): Yes
When (Please give year): 2010
Growth Related? (Yes/No): No

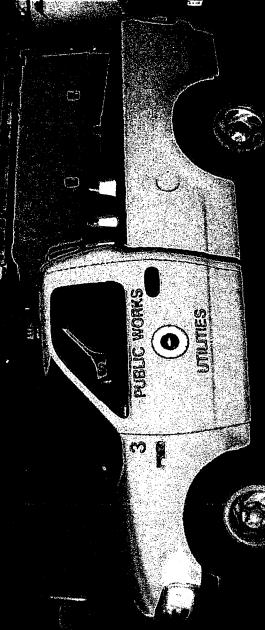

PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT

Proposed ("✓" all that apply) Building Renovation, Addition, New Construction

1. General Project Description? Replace the existing Water & Sewer vehicle Truck #3. This truck was originally purchased in 2002 for \$11,962 after \$3,700 trade-in. The recommended useful life is 8 years according to Town of Exeter Vehicle Replacement Schedule (VRS), and is currently delayed by 2 years. This truck has been delayed an additional 3 years due to the truck's excellent condition. The vehicle repairs have been routine, with one major repair in 2010 for \$2,218.

2. Rationale? This vehicle is the main Water & Sewer vehicle used during everyday activities, water & sewer breaks, travelling to classes, and other miscellaneous activities/duties within the Water & Sewer Department.

3. Operating Budget Impact? The price was developed from the "Grappone Ford" state bid from July 2011 + 4.5% inflation rate. Current vehicle has 72,505 miles; This price does not reflect a trade

<p>1. General Project Description? Replace the existing Water & Sewer vehicle Truck #11. This truck was originally purchased in 2008 for \$29,942 with service body. The recommended useful life is 8 years according to the Town of Exeter Vehicle Replacement Schedule (VRS). DPW acquired the vehicle in 2008, and is scheduled for replacement in 2016. The truck repairs have been routine maintenance.</p> <p>2. Rationale? This vehicle is one of the main Water & Sewer Vehicle used during everyday activities, water & sewer breaks.</p> <p>3. Operating Budget Impact? The price was developed from the "Grappone Ford" bid from 2011 plus 4.5% inflation; Current vehicle has 24,745 miles; This price does not reflect a trade</p>

2013 - 2018 CIP Vehicle/Equipment Request

		Date Submitted:	June 28, 2012																																																												
		Year Funding is Requested:	2013																																																												
Department:	Public Works-Water & Sewer	Priority (1 of 8, etc.):	1 of 5																																																												
Project Title:	Replace W&S Multi-Purpose Response Truck	Estimated Total Cost:	\$ 43,063																																																												
Contact:	Michael Jeffers	Estimated Useful Life (Years):	8																																																												
Phone:	778 - 0591 ext. 165	Previously Presented? (Yes/No)	Yes																																																												
e-Mail:	mjeffers@town.exeter.nh.us	When (Please give year):	2009																																																												
Growth Related? (Yes/No):		No																																																													
PROJECT DESCRIPTION, RATIONAL & OPERATING BUDGET IMPACT <p>Proposed ("✓" all that apply) <input type="checkbox"/> Building Renovation, Addition, New Construction <input checked="" type="checkbox"/> Equipment New/Replacement <input type="checkbox"/> Real Property Acquisition <input type="checkbox"/> Road Improvements <input checked="" type="checkbox"/> Water/Sewer System Improvements</p> <p>1. General Project Description? Replace the existing Water & Sewer mobile valve operator/water main flushing and wastewater collection inspection submersible camera platform. This platform carries multiple devices and is listed as vehicle Truck #19. The current vehicle will be replaced with a 1.5 to 2 ton truck outfitted with an enclosed utility box body. The current truck was incorrectly undersized when ordered and has been at risk of suspension damage since it was first purchased. This upgrade will provide added dependency to the fleet. This truck is used as a first response vehicle during emergency situations, namely water or sewer line breaks and a tool for federal USEPA sewer regulatory compliance (i.e., camera inspection of sewer pipelines/manholes). This truck was originally purchased in 2001 for \$31,925 + \$2,300 (for Enclosed Utility Box Body to protect electronics/tools). The recommended useful life is 8 years according to the Town of Exeter Vehicle Replacement Schedule (VRS) and DOT standards and so is currently overdue by 4 years for replacement. The truck repairs to date are routine, but replacement is highly recommended due to the high frequency of use during normal hours & after hours emergency situations.</p> <p>2. Rationale? This vehicle is the primary Water & Sewer vehicle used during everyday departmental activities, water & sewer breaks and carries the necessary tools for operations & maintenance. Replacement was scheduled for 2011, but should've been replaced in 2009 according to useful life.</p> <p>3. Operating Budget Impact? The price was developed from the "Grappone Ford" state bid from July 2011 + 4.5% inflation rate, North American Equipment Upfitters, Inc. website prices for the enclosed utility box body with installation, and TOE in-house mechanics expenses. Current vehicle has 66,760 miles. This price does not reflect a trade; vehicle is designed for towing and carrying capacities.</p>

Growth Related? (Yes/No):	No																
 <p>1. General Project Description? Replace the existing Water & Sewer high pressure jet cleaning/vacuum machine identified as "Vactor" Truck #67. The Vactor machine was originally purchased in 2004 for \$229,455. The recommended useful life is 6 years to 8 years maximum according to the Town of Exeter Vehicle Replacement Schedule (VRS) and has been delayed by 2 years for replacement. This is 1 year beyond the recommended maximum expected life. The interior walls of the large vacuum/pressure tank corrode over time to a potential catastrophic failure point. The variety of uses such as trenchless water jet excavating, clogged water service clearing and sewer line cleaning/blockage removal by the equipment on this vehicle make it an essential piece of the fleet for Town work at critical moments and for regulatory compliance. The overall maintenance has been routine, excepting recent repairs in April 2009 for \$6,772 for areas on the truck that experience high abrasive wear from sands and gravel, and will continue to deteriorate.</p> <p>2. Rational? The Vactor WBS machine/truck is utilized for water break repairs, responds to about 75 sewer blockage issues annually and provides NHDES mandated response for the smaller sewage lift stations lacking generator power. The USEPA administrative order currently requires 10 miles of sewer line cleaning annually on a 5 year repeating cycle and the pending NHDES permit will require rapid response to reported slow, blocked or overflowing sewers (sanitary sewer Overflow or "SSOs"). This is normal expected practice by most Town's sewer CMOM Capacity, Management, Operations & Maintenance) Program even without the recent legal obligations recently imposed upon Exeter.</p> <p>3. Operating Budget Impact? A 6 year lease or lease/purchase agreement; the price was developed using quote from CN WOOD in 2011 + 4.5% inflation rate; currently has 4,445 hrs on the vehicle. The cost of these machines has risen due to an industry wide redesign that uses double vacuum pumps and larger cyclone grit separators for longer life as well as raw materials (steel) costs increase. Trade-in is determined at time of sale and will be negligible. After inspection of the vehicle by CN Wood, it was determined that about \$11,000 of work is needed to address immediate concerns. The X-ray results of the back tank are being summarized into a report from the x-raying company.</p>

<p>1. General Project Description? This car is an older retired police vehicle that the W/S Managing Engineer uses during the work day, or other employees take to required classes. This vehicle was originally purchased in 2005 for Police Department use. The recommended useful life for DPW use is 6 years according to the Town of Exeter Vehicle Replacement Schedule (VRS). DPW acquired the vehicle in 2008, and is scheduled for replacement in 2014.</p>															
<p>2. Rationale? Replacement due to age and wear; lower repair costs; Replacement was scheduled for 2011 if continued use as Police Department vehicle; DPW has a scheduled replacement in 2014</p>															
<p>3. Operating Budget Impact? The replacement cost was developed as an assumed repair cost that wouldn't exceed the given value once DPW acquires the vehicle. Current vehicle has 122,888 miles; This price does not reflect a trade</p>

<p>1. General Project Description? Replace the existing Water & Sewer Wachs Travel Vacuum with trailer & Ingersoll Rand Trailer Air Compressor. This equipment is the main Water & Sewer equipment used during everyday activities, water & sewer breaks, valve and curbstop box cleaning, and is considered essential to daily operations. The Wachs Travel Vacuum was originally purchased in 2002 and was mounted on a trailer purchased in 1994. The Ingersoll Rand Air Compressor was originally purchased in 1994. The recommended useful life is 10 years according to Town of Exeter Vehicle Replacement Schedule (VRS), so the trailer has been delayed 9 years, the Travel Vac is scheduled for replacement but has been delayed an additional 3 years due to its good condition, and the Air Compressor has been delayed for 9 years.</p> <p>2. Rationale? Replacement due to age and wear; lower repair costs</p> <p>3. Operating Budget Impact? The price was developed using the original cost plus a 4.5% inflation from year of purchase (DPW Vehicle Replacement List).</p>

1. General Project Description?	Replace the existing Water & Sewer vehicle Truck #2. This truck was originally purchased in 2006 for \$29,942 with service body after \$1,000 trade-in. The recommended useful life is 8 years according to the Town of Exeter Vehicle Replacement Schedule (VRS). This truck has initially been delayed an additional 3 years due to the truck's excellent condition. The truck repairs have been routine maintenance.																																																			
2. Rationale?	This vehicle is one of the main Water & Sewer Vehicle used during everyday activities, water & sewer breaks.																																																			
3. Operating Budget Impact?	The price was developed using the original cost plus a 4.5% inflation from year of purchase (DPW Vehicle Replacement List); Current vehicle has 43,517 miles; This price does not reflect a trade
